- Doctors advise young people to eat vegetables to more energy.
- If my brother kept practising by himself, he could his skills.
- Japan is among the Asian countries in having advanced technology.

B) Reading Comprehension (16 Marks)

16

Read the following passage, then answer the questions that follow:

Living in space is not the same as living on Earth. In space, astronauts' bodies change. On Earth, our lower body and legs carry our weight. This helps keep our bones and muscles strong. In space, astronauts float. They do not use their legs much. Their lower backs begin to lose strength. Their leg muscles do too. The bones begin to get weak and thin. This is very bad for astronauts' bodies. So, how do astronauts help their muscles and bones? They must exercise in space every day.

The heart and blood change in space, too. When we stand up on Earth, blood goes to our legs. The heart has to work extra hard against gravity to move the blood all around the body. In space, without the pull of gravity, the blood moves to the upper body and head. Water in the body also does the same thing. Blood and water in the body move from the bottom of the body to the top. The brain thinks that there are too many fluids. **It** will tell the body to make less. When the **astronauts** come back to Earth, they do not have enough fluids in their bodies. It takes their bodies a few days to make more blood and water. The astronauts have to rest so their bodies have time to make new blood and water. If they don't, they can feel very weak. They might even faint!

a) From a, b, c and d choose the best answer. (6x 2= 12 Marks)9. The **best** title of the passage is:

- Living on Earth
- Travelling in the Past
- Our Bones and Muscles
- Astronauts' Bodies in Space

10. The underlined word " **astronauts** " in the 2nd paragraph is closest in meaning to:

- drivers
- workers
- spacemen
